

20mm PORCELAIN PAVERS

Create seamless exterior spaces onto compacted Soil, Sand or Grass without the cost of Concrete.

- Match exterior tiles for indoor-outdoor flow
- Slip-resistant
- Wear-resistant
- Huge range of options
- Highly resistant to heavy loads
- Quick & easy to install
- Removable
- Frost-resistant
- Colours do not fade
- Resistant to stains/spills
- Impervious/Mould resistant
- Allows water drainage

20mm PORCELAIN PAVERS

What are the Benefits?

- Highly resistant to heavy loads
- No need for an expensive concrete slab
- Slip-resistant finish
- Quickly installed and easily removed
- Frost and Salt-resistant
- Cost effective
- No requirement for sealing
- Mould resistant – porcelain has low water absorption
- Scratch-resistant
- Strength tested - can drive on a Porcelain tile if installed correctly onto concrete.

With no sealing requirements, low levels of maintenance and high slip resistance, Tile Warehouse Porcelain Pavers are the ideal solution for use in both public and private outdoor areas.

FROST RESISTANT

COLORS DO NOT FADE OVER TIME

RESISTANT TO SUDDEN TEMPERATURE CHANGES

RESISTANT TO ACID, CHEMICALS, SALT, ETC.

RESISTANT TO DAMAGE FROM MOULD AND MOSS

EASY TO CLEAN

QUICK AND EASY TO INSTALL

EASY TO REMOVE

REUSABLE

READILY SERVICEABLE

INSTALLATION WITH ADHESIVE POSSIBLE

MATCHES INTERIOR FLOORING

ANTISLIP

SPECIAL MATCHING PIECES

HIGHLY RESISTANT TO LOADS

ALLOWS WATER DRAINAGE

SUITABLE FOR RAISED INSTALLATIONS

EXTREMELY LONG-LASTING

WIDE RANGE OF FINISHES

IMPERVIOUS

For External use on patios, balconies, around pools and pathways.

Easy Installation...

Install on Sand...

Grass...

or on a Raised Floor!

Create seamless exterior spaces onto compacted soil without the cost of concrete or onto raised floor systems. Tile Warehouse has the perfect range to meet and exceed your requirements with product that is structurally engineered for high resistance to breaking load and stress.

Dry installation on grass.

Dry installation on gravel and sand.

Installation with adhesive on screed.

Raised installation.

Dry placement on sand.

Spacer for application on gravel

Transparent plastic cross spacer for laying on gravel or irregular surfaces.

TILE WAREHOUSE PORCELAIN PAVER RANGE

20mm Porcelain Pavers are twice the thickness of most tiles and have all the benefits of a regular porcelain tile. They are the ideal paving solution in that they will not stain, fade and require no treatment. They are also easy to install. Porcelain pavers and slabs can be laid dry on sand, grass, or gravel or they can be laid on concrete with adhesive, as you would a traditional porcelain tile.

Another alternative is to lay them using adjustable, raised supports such as our Pro-Jack supports with open joints allowing for drainage and providing a level tiled area out from doors to exterior living areas. Porcelain pavers tend to be more interesting in design compared to traditional pavers, and they often complement a 10mm porcelain range. This way they can be used both inside and outside creating internal, external flow. Here are a few of our porcelain paver collections:

Bluestone

Create indoor/outdoor flow with the Bluestone flooring solution. Also available in 10mm and in matching 300x600x20mm bullnoses.

Black Nero

Matching 10mm for indoor-outdoor flow.

Memphis Silver

NG Silver Stone Paver

Matching 10mm for indoor-outdoor flow.

New York Paver

Como Travertine

Deck Crystal

Mineral Project

Paradigm

Also available in matching Bullnoses in Light Grey & Grey 350x600mm, and in matching 10mm in two sizes and finishes, hexagonals and decorators.

Ext. Pietra Grey

Quartz Grey

Ext. Stone Grey

Vista Grey

Also available in matching 600x600x10mm & 600x1200x10mm for indoor-outdoor flow.

PRO-JACK: Installation Guide

Option 1: Installation onto a Raised Floor

Using our "Pro-Jack Tile System", we offer a comprehensive range of jack options.

See our "Pro-Jack Tile System" Brochure or visit our website for further information; www.tilewarehouse.co.nz/projacktilessystem

Option 2: Installation onto Soft ground

(compacted gravel, sand, pebbles and grass).

Dig the foundations of the site to pave by removing the soil up to a depth of 10cm.

Delimit the area to pave with a concrete curb or other resistant material.

Create a layer of sand of 5-10cm. Level the site with a straight edge.

Lay the slabs with a joint of 3-5mm, using specific spacer. Check the flatness from time to time.

The joint between the slab and the other can remain open or be filled by sand.

The stratigraphic sequences shown are to be considered indicative and have the sole purpose of showing the type of application to get a flooring laid in workmanlike manner. We strongly recommend that you refer to the regulations in force in each country by the works management.

Spacer for application on gravel

Transparent plastic cross spacer for laying on gravel or irregular surfaces.

DIY

WHAT YOU'LL NEED

MATERIALS:

- Tile Warehouse Porcelain Pavers**
- 3mm Gravel Tile Spacers** from Tile Warehouse
- Bedding Sand** – Clean river sand Grade 1 or No.3
- Joint Sand** – Pave sand – Pavelock or Pavelfill

TOOLS:

- Straight Edge** (to screed the sand)
- Rubber Mallet**
- Rake**
- Wheelbarrow**
- Marking Pencil**
- Screeding Rails x 2**
- String line**
- Tile Scribe Cutter or grinder** with diamond cutting blade if cutting tiles

PREPARING THE SAND BASE

- Spread the sand evenly over the sub-base to a depth of 80mm allowing 10mm for settlement. Set screed rails into the sand and use a straight edge to screed (level) the sand. On smaller areas this can be done freehand using a straight edge and spirit level.
- If there is an adjoining wall or floor that you are butting up to, the final height of the paving needs to be below any dampcourse membrane.

LAY THE PAVERS

- Lay the pavers in the desired pattern starting from the bottom if it is a sloping site. Avoid laying downhill if possible. Use the 3mm Tile Warehouse Gravel Spacer between pavers to keep them straight and to allow for the joint sand.
- Tap each paver into position with the rubber mallet.
- If you need to cut your pavers for edge filling, use a tile scribe or diamond blade on a grinder.

COMPACT THE PAVERS

- Compact the pavers with mallet and sweep dry joint sand into the joints.

FINISHING TOUCHES

- Joints in paving with a high traffic volume will seal quite quickly and little further maintenance will be required. Lower volume traffic areas may require periodic topping up with joint sand.

Design & Selection made Easy for 30 years!
